MOVEMENT ANALYSIS FOR:

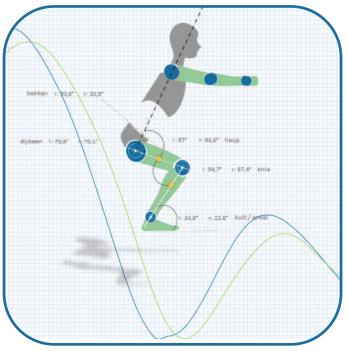
Sports
PERFORMANCE ENHANCEMENT

Rehab
MONITORING

Elderly
FALL PREVENTION

How we move impacts everything we do; issues with movement directly affects quality of life. People seeking a solution for this often end up with a doctor or physical therapist who rarely succeed in finding out the real cause of the functional problems.

The ORYX GO! supports the health care professional in its decision making by objectifying the movement pattern enabling qualitatative human movement analyis. It reveals causes which otherwise would stay hidden and unnoticed.



The ORYX GO!

8 easy and quick to apply IMUs on: feet, calves, thighs & pelvis.

Wireless realtime transmission of data to gateway.

Automatic report generation with unique performance indicators

Easy access to data with mobile device.

ORYX is specialized in assessing the quality of movement, identify causes and directly act upon movement issues. We focus on the development and application of movement technology and aim to improve quality of life, enhance sports performance, improve healthcare outcomes and to reduce health-care costs by making people move better in less than 30 min.

INNOLABS

This Project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 691556
